Lay Research Group

We are building an enthusiastic patient and public group, the LAY RESEARCH GROUP, to help plan, carry out and share research within Lancashire Teaching Hospitals, the NIHR Lancashire Clinical Research Facility and the wider local community.

Come and find out what research is really all about...what you do, and how much time you spend is up to you. Share your opinion and help inform the way we do healthcare research.

1 About Research

Research is not just for scientists working in laboratories doing experiments.

Healthcare Research is about working with patients and the public to find better ways of preventing and treating diseases and improving care.

You don't have to be a scientist, or need any previous experience of research to get involved...just a desire to help shape your future NHS.

2 About Public Involvement

We are a volunteer group of patients and members of the public...

...involved in how research is carried out at RPH, CDH and the NIHR LCRF

- Follow us on Facebook and find out what's happening
- Join in and be part of the action
- Offer your advice and ideas
- Give something back to the NHS

3 About You

Your experiences and opinions are unique and add an important viewpoint. We want patients and members of the public to work together with us at Preston and Chorley hospitals to bring new voices and ideas to research.

You can have your say in how research is done

You can contribute to research events and activities

You can work alongside staff to develop and carry out research

You can be part of the research community
